Integrity - Independence -Insight

Are you concerned about...

How a computer or digital media has been used?

What data is stored on the hard drive?

What web sites have been visited?

Computer forensics reveals secrets that lie beneath the surface...

What e-mails have been received?

What data was deleted, and why?

How to protect and safeguard your company's computers?

If you suspect e-mail abuse, intellectual property theft, downloading of pornography, or using company computers for personal business, you have a very sensitive matter on your hands. If you need to find the evidence on the computer, RBS computer forensic services can find what you need to make critical decisions.

PROFESSIONAL ASSISTANCE IN UNCOVERING EVIDENCE

When you are involved in litigation, or an internal investigation is underway, expert computer forensic analysis can make a major difference in outcomes.

You want the evidence you recover to stand up in court or in an internal hearing, which means you should not ask untrained staff to examine computers or digital media.

RBS computer forensic experts can assist you from the onset, finding the facts that lead to a successful prosecution or disciplinary action.

RELY ON OUR EXPERTISE

RBS computer forensics examiners are experts at securing digital evidence and investigating crimes and misdeeds with computers. Not only is their work of the highest quality, meeting stringent digital evidence standards, but they often have testified in court about their findings.

WHAT WE CAN DO FOR YOU

RBS Computer Forensic examiners can quickly deploy to address your situation. Using state of the art hardware and software, they will make a copy of your digital media, then apply their training and know-how to

begin uncovering the evidence. Our court-hardened expert witnesses will then present these findings in court or at your in-house hearing.

Besides media searching and analysis, we will do a review of hidden and encrypted data, and crack passwords, if necessary. Even if the evidence is hidden or deleted, we will find it!

OUR COMMITMENT TO YOU...

- **Data security and integrity**
- **Comprehensive fact reporting**
- **State of the art methodologies with the latest technology**
- **Expert testimony**
- **Immediate response capability**
- **Outstanding customer service**
